CLAIMS

1.   A method of accounting for dead nozzle remapping in a multi-nozzle printhead, including remapping a fixative intended for a dot to be printed by the dead nozzle.

5

2.   A method according to claim 1, wherein the remapping includes remapping the fixative to an operative nozzle to which dot data intended for the dead nozzle for printing at or adjacent a position at which the dead nozzle would have printed.

10   3.   A method according to claim 1, wherein the remapping includes preventing output of fixative onto the position where the dead nozzle would have printed a dot had it been operative.
